## Volume 68 (2002)

**Accuracy**; Terminology; Electronic patient records; Data retrieval; Data quality; Quality assurance **68**, 91

**Adaptivity**; Knowledge representation; User/computer interface; eXtended markup language (XML) standards; Clinical workstation **68**, 219

**API**; XML; Tumour documentation; Tumour registry; Clinical workstation **68**, 27

XML; API; Tumour documentation; Tumour registry; Clinical workstation **68**, 27

**Cardiology**; Haptic display; Palpation; Surgery simulation; Virtual reality **68**, 155

**Case-based reasoning**; Electronic medical records; Knowledge acquisition; XML **68**, 187

**Case based reasoning**; Knowledge management; Multi modal reasoning **68**, 79

**Clinical decision support systems**; Practice guidelines; Knowledge representation; Theoretical models; Computer-assisted decision making **68**, 59

**Clinical workstation**; XML; API; Tumour documentation; Tumour registry **68**, 27

**Clinical workstation**; Knowledge representation; Adaptivity; User/computer interface; eXtended markup language (XML) standards **68**, 219

**Cognitive science**; Computer-based patient record; Electronic medical record; Web; Internet **68**, 39

**Component architecture**; Integrated electronic health record; Message-based integration; Federated architecture; Healthcare information infrastructure; Integrated regional health information networks; Component-based software engineering **68**, 3

**Component-based software engineering**; Integrated electronic health record; Message-based integration; Federated architecture; Healthcare information infrastructure; Integrated regional health information networks; Component architecture **68**, 3

**Computer-assisted decision making**; Practice guidelines; Knowledge representation; Theoretical models; Clinical decision support systems **68**, 59

**Computer-assisted [L01.700.508.100]**; User-computer interface [L01.700.568.810.910]; Decision making; Informations visulaization; Survey **68**, 141

**Computer-based patient record**; Electronic medical record; Web; Internet; Cognitive science **68**, 39

**Concept representation**; Standards; Terminologies; Nursing **68**, 71

**Consumer informatics**; Electronic medical records; Personal health records; World wide web **68**, 113

**Contact center**; Telemedicine; Wireless communication; Mobile telephony; User interface; Home care **68**, 99

**Controlled health vocabularies**; Quality assurance; Standardization; Data representation; Knowledge management **68**, 175

**Critical incident technique**; Public health; Requirements engineering; Information systems design; Public health informatics **68**, 165

**Data collection**; Nursing minimum data set; Nursing research; Statistics; Healthcare evaluation mechanisms; Feedback **68**, 205

**Data quality**; Terminology; Electronic patient records; Accuracy; Data retrieval; Quality assurance **68**, 91

PII: S1386-5056(02)00157-0

**Data representation**; Controlled health vocabularies; Quality assurance; Standardization; Knowledge management **68**, 175

**Data retrieval**; Terminology; Electronic patient records; Accuracy; Data quality; Quality assurance **68**, 91

**Decision making**; User-computer interface [L01.700.568.810.910]; Computer-assisted [L01.700.508.100]; Informations visulaization; Survey **68**, 141

**Diabetes patients**; Home health care; Requirements; Monitoring; JAVA technology **68**, 129

**Diagnosis**; Protocol-based care; Treatment management; ASGAARD; Hyperbilirubinemia; ASBRU **68**, 49

**Electronic medical record**; Computer-based patient record; Web; Internet; Cognitive science **68**, 39

**Electronic medical records**; Case-based reasoning; Knowledge acquisition; XML **68**, 187

**Electronic medical records**; Consumer informatics; Personal health records; World wide web **68**, 113

**Electronic patient records**; Terminology; Accuracy; Data retrieval; Data quality; Quality assurance **68**, 91

**eXtended markup language (XML) standards**; Knowledge representation; Adaptivity; User/computer interface; Clinical workstation **68**, 219

**Federated architecture**; Integrated electronic health record; Message-based integration; Healthcare information infrastructure; Integrated regional health information networks; Component architecture; Component-based software engineering **68**, 3

**Feedback**; Nursing minimum data set; Nursing research; Data collection; Statistics; Healthcare evaluation mechanisms **68**, 205

**Haptic display**; Palpation; Cardiology; Surgery simulation; Virtual reality **68**, 155

**Healthcare evaluation mechanisms**; Nursing minimum data set; Nursing research; Data collection; Statistics; Feedback **68**, 205

**Healthcare information infrastructure**; Integrated electronic health record; Message-based integration; Federated architecture; Integrated regional health information networks; Component architecture; Component-based software engineering **68**, 3

**Home care**; Telemedicine; Contact center; Wireless communication; Mobile telephony; User interface **68**, 99

**Home health care**; Diabetes patients; Requirements; Monitoring; JAVA technology **68**, 129

**Hyperbilirubinemia**; Protocol-based care; Diagnosis; Treatment management; ASGAARD; ASBRU **68**, 49

**Informations visulaization**; User-computer interface [L01.700.568.810.910]; Decision making; Computer-assisted [L01.700.508.100]; Survey **68**, 141

**Information systems design**; Public health; Requirements engineering; Critical incident technique; Public health informatics **68**, 165

**Integrated electronic health record**; Message-based integration; Federated architecture; Healthcare information infrastructure; Integrated regional health information networks; Component architecture; Component-based software engineering **68**, 3

**Integrated regional health information networks**; Integrated electronic health record; Message-based integration; Federated architecture; Healthcare information infrastructure; Component architecture; Component-based software engineering **68**, 3

**Internet**; Computer-based patient record; Electronic medical record; Web; Cognitive science **68**, 39

**Knowledge acquisition**; Case-based reasoning; Electronic medical records; XML **68**, 187

**Knowledge management**; Case based reasoning; Multi modal reasoning **68**, 79

**Knowledge management**; Controlled health vocabularies; Quality assurance; Standardization; Data representation **68**, 175

**Knowledge representation**; Adaptivity; User/computer interface; eXtended markup language (XML) standards; Clinical workstation **68**, 219

**Knowledge representation**; Practice guidelines; Theoretical models; Computer-assisted decision making; Clinical decision support systems **68**, 59

**Message-based integration**; Integrated electronic health record; Federated architecture; Healthcare information infrastructure; Integrated regional health information networks; Component architecture; Component-based software engineering **68**, 3

**Mobile telephony**; Telemedicine; Contact center; Wireless communication; User interface; Home care **68**, 99

**Monitoring**; Home health care; Diabetes patients; Requirements; JAVA technology **68**, 129

**Multi modal reasoning**; Knowledge management; Case based reasoning **68**, 79

**Nursing minimum data set**; Nursing research; Data collection; Statistics; Healthcare evaluation mechanisms; Feedback **68**, 205

**Nursing research**; Nursing minimum data set; Data collection; Statistics; Healthcare evaluation mechanisms; Feedback **68**, 205

**Nursing**; Standards; Concept representation; Terminologies **68**, 71

**Palpation**; Haptic display; Cardiology; Surgery simulation; Virtual reality **68**, 155

**Personal health records**; Consumer informatics; Electronic medical records; World wide web **68**, 113

**Practice guidelines**; Knowledge representation; Theoretical models; Computer-assisted decision making; Clinical decision support systems **68**, 59

ASBRU; Protocol-based care; Diagnosis; Treatment management; ASGAARD; Hyperbilirubinemia **68**, 49

ASGAARD; Protocol-based care; Diagnosis; Treatment management; Hyperbilirubinemia; ASBRU **68**, 49

**Protocol-based care**; Diagnosis; Treatment management; ASGAARD; Hyperbilirubinemia; ASBRU **68**, 49

**Public health informatics**; Public health; Requirements engineering; Critical incident technique; Information systems design **68**, 165

**Public health**; Requirements engineering; Critical incident technique; Information systems design; Public health informatics **68**, 165

**Quality assurance**; Controlled health vocabularies; Standardization; Data representation; Knowledge management **68**, 175

**Quality assurance**; Terminology; Electronic patient records; Accuracy; Data retrieval; Data quality **68**, 91

**Requirements engineering**; Public health; Critical incident technique; Information systems design; Public health informatics **68**, 165

**Requirements**; Home health care; Diabetes patients; Monitoring; JAVA technology **68**, 129

**Standardization**; Controlled health vocabularies; Quality assurance; Data representation; Knowledge management **68**, 175

**Standards**; Concept representation; Terminologies; Nursing **68**, 71

**Statistics**; Nursing minimum data set; Nursing research; Data collection; Healthcare evaluation mechanisms; Feedback **68**, 205

**Surgery simulation**; Haptic display; Palpation; Cardiology; Virtual reality **68**, 155

**Survey**; User-computer interface [L01.700.568.810.910]; Decision making; Computer-assisted [L01.700.508.100]; Informations visulaization **68**, 141

**JAVA technology**; Home health care; Diabetes patients; Requirements; Monitoring **68**, 129

**Telemedicine**; Contact center; Wireless communication; Mobile telephony; User interface; Home care **68**, 99

**Terminologies**; Standards; Concept representation; Nursing **68**, 71

**Terminology**; Electronic patient records; Accuracy; Data retrieval; Data quality; Quality assurance **68**, 91

**Theoretical models**; Practice guidelines; Knowledge representation; Computer-assisted decision making; Clinical decision support systems **68**, 59

**Treatment management**; Protocol-based care; Diagnosis; ASGAARD; Hyperbilirubinemia; ASBRU **68**, 49

**Tumour documentation**; XML; API; Tumour registry; Clinical workstation **68**, 27

**Tumour registry**; XML; API; Tumour documentation; Clinical workstation **68**, 27

**User/computer interface**; Knowledge representation; Adaptivity; eXtended markup language (XML) standards; Clinical workstation **68**, 219

**User-computer interface [L01.700.568.810.910]**; Decision making; Computer-assisted [L01.700.508.100]; Informations visulaization; Survey **68**, 141

**User interface**; Telemedicine; Contact center; Wireless communication; Mobile telephony; Home care **68**, 99

**Virtual reality**; Haptic display; Palpation; Cardiology; Surgery simulation **68**, 155

**Web**; Computer-based patient record; Electronic medical record; Internet; Cognitive science **68**, 39

**Wireless communication**; Telemedicine; Contact center; Mobile telephony; User interface; Home care **68**, 99

**World wide web**; Consumer informatics; Electronic medical records; Personal health records **68**, 113

**XML**; Case-based reasoning; Electronic medical records; Knowledge acquisition **68**, 187
